

Control Systems

IB Computer Science

*Content developed by
Dartford Grammar School
Computer Science Department*

HL Topics 1-7, D1-4

1: System design

2: Computer Organisation

3: Networks

4: Computational thinking

5: Abstract data structures

6: Resource management

7: Control

D: OOP

HL only 7 Overview

Centralized control systems

7.1.1 Discuss a range of control systems

7.1.2 Outline the uses of microprocessors and sensor input in control systems

7.1.3 Evaluate different input devices for the collection of data in specified situations

7.1.4 Explain the relationship between a sensor, the processor and an output transducer

7.1.5 Describe the role of feedback in a control system

7.1.6 Discuss the social impacts and ethical considerations associated with the use of embedded systems

Distributed systems

7.1.7 Compare a centrally controlled system with a distributed system

7.1.8 Outline the role of autonomous agents acting within a larger system

1: System design

2: Computer Organisation

3: Networks

4: Computational thinking

5: Abstract data structures

6: Resource management

7: Control

D: OOP

Topic 7.1.7

Compare a **centrally controlled** system with a **distributed** system

CENTRALIZED
(A)

DECENTRALIZED
(B)

DISTRIBUTED
(C)

Definitions:

- **Centralised system:** is computing done at a **central location**, using **terminals** that are attached to a central computer. The computer itself may control all the peripherals directly (if they are physically connected to the central computer), or they may be attached via a terminal.
- **Distributed system:** is a **system** in which components located on **networked computers** communicate and coordinate their actions by passing messages. The components **interact** with each other in order to achieve a common goal.

Centralised system

Distributed system

Advantages

Advantages of centrally controlled system:

- Easier to administrate
- More control

Advantages of distributed systems:

- Quicker access
- Shared load
- Response more specific to environment

Disadvantages

Disadvantages of centrally controlled system:

- If the main sensor/controller fails, the whole system fails

Disadvantages of distributed systems:

- Much more expensive to have multiple controllers/sensors
- Much more complex than a centralised system

Exam note!

This curriculum point requires you to **compare** the different options.

That is exam speak for **knowing/discussing advantages, disadvantages** and for **comparing** them against one another to arrive at a conclusion.
